- Gaining valuable experience while working in a real-world professional environment?
- Visiting the USA and seeing with your own eyes how people work and live there?

Then join our Internship Program!

Internship Opportunities within Engineering and Environmental Science

Field Data Collection and Instrument System Maintenance

This internship position involves serving as a field assistant responsible for maintenance of extensive network of flow and water quality monitoring stations, developing innovative approaches in an effort to meet the new water quality goals, analyzing and reporting on collected data, developing project websites and attending meetings with local community of farmers as well as university level scientists.

We are seeking strongly motivated students willing to assist local non-giving up agricultural/scientific community striving to explore and develop strategies to protect and enhance Florida's sensitive natural resources and restore the state's water quality, while sustaining economically viable and compatible agricultural industry.
